The promises of subscription-based software products and platforms are very alluring for companies interested in building their technological competitive advantage—but with their promise of convenience comes sacrifice. IT leaders must take seriously the customization, data management and ownership, and security challenges SaaS model app platforms present. Even the possibility of a SaaS vendor going out of business and taking their technology with them must be considered.

For IT leaders interested in building a competitive advantage in mobile and IoT, the Sempercon Development Platform serves as a viable alternative to trendy SaaS and BaaS providers. It's one of the few platforms available to mobile and IoT developers that utilizes a source license model.

Just imagine, developers can rapidly develop and deploy your app without your business having to sacrifice its ownership over the app's source codes or generated data. Through the open platform, your developers can leverage popular third party data service providers. The platform also allows developers to fully customize the interfaces and administrative controls of your app. The enterprise-grade platform's infrastructure is also scalable, allowing you the flexibility to adapt to ever-changing business needs and meet future challenges.

Evolve your competitive advantage with IoT, quickly and securely

There's nothing standard about deploying an IoT application—that's why the Sempercon Development Platform was designed to address your business' uniquely complex hardware connectivity, data and device management challenges. Accelerate launch time and reduce the costs associated with developing IoT-enabled products, services and applications without having to sacrifice the security and ownership of your solution. Sempercon's engineers lead you and team through the app development and management process so that you can focus on the success of your IoT initiative.

DATA OWNERSHIP

Maintain exclusive rights over your app's source code and the monetizable data it generates

COMPETITIVE ADVANTAGE

Product developments of your privately owned IoT platform translate into intellectual property

SECURITY

Data security measures are customized to suit industry regulations and business needs

Hassle-Free, Highly Scalable Mobile App Development

Our platform agnostic solution allows you to focus on understanding your users' needs and developing a valuable user experience. Using the Sempicon Development Platform, our team of engineers develop your app's frontend and backend so that you can focus on your business' other pressing challenges. Important mobile app features like notifications, network management, and more are pre-built into our platform so that time isn't wasted reinventing the wheel for every app.

DATABASE MANAGEMENT

Backup, restore,
reset and perform
other operations

ADMIN DASHBOARD

Easily manage your
app's features from a
centralized dashboard

API ACCESS MANAGEMENT

Manage outside
accessibility of your
apps' endpoints

PUSH NOTIFICATIONS

Send notifications to
iOS & Android devices

CONTENT MANAGEMENT

Create, modify or delete
content; grant or revoke
content access

A long term solution to Parse's shutdown

The risk of a platform shutdown isn't the only reason to be wary of mobile BaaS platforms. In order to service a broad spectrum of users, such platforms often support a limited set of features. The quality and depth of these platforms often become too shallow to meet the needs of growing mobile apps. For this reason, many businesses are turning to platforms like ours that support the deployment of a custom end-to-end solution.

By migrating your old Parse backend server to our platform, you can customize your mobile solution, and maintain full ownership over your backend server and the data your app generates. Allow our engineers to build and manage your app's backend so that you and team can focus on adapting your solution to changing business processes, monitoring user-generated feedback and other pressing strategic concerns. Sempercon's Development Platform is a long term solution that allows you to build up your intellectual property, develop a competitive advantage and create real product value.
